Step 0 — baseline (no LLM)
3 isolated reruns
T1 → PASS, PASS, PASS
no failure log exists — the bug never shows up on a rerun
Round 1 — plan (1 LLM call)
hypothesis: "static iteration counters and value lists never reset; 2nd JVM run sees doubles"
strategy: T2, runs=2
sub-run 1 PASS → sub-run 2 FAIL (expected:<100> but was:<200>)
Diagnose (1 LLM call)
category: NIO (conf 0.98)
root cause: static accumulator never reset across executions
evidence: counter site L83–90 + assertion L460 (fix adds reset there)
